Of all digital SLR camera producing brands, Nikon is considered one of the best. As with the boom of digital cameras all over the world, Nikon joined the bandwagon by producing what they make best, thus the new era of the Nikon digital camera was born - digital SLR.

Nikon D70, a 6-mega pixel camera, is a top performer in digital SLR variety. Coated with polycarbonate over its stainless steel chassis, this Nikon digital camera is furnished with a 50mm AF Nikkor lens that can combine with an 18-70mm kit lens and still be portable enough to be carried around. Whether you are taking shots in the sun or in shadows, you can do so effortlessly with its speed range of 200-600. and why would not it be?! It has a shooting rate of 3 frames every second along with 1/8000 second shutter rate, making your photography adventure as easy and enjoyable as just clicking away. this Nikon digital camera is supported with a Flash card. You can use a flash card with this model of Nikon Digital SLR Camera.

Another SLR from

Nikon is the Nikon Coolpix 8800. An 8-mega pixel Nikon digital camera, the Coolpix 8800 has a compact body. It has a flip out and swivel LCD making it really class apart. This Nikon digital camera features an image stabilizer system to reduce camera shakes particularly on long shots since this gadget can zoom up to 10x (optical zoom) and can focus to up to 3cm in macro mode with its 35-350mm lens. Key controls are very user-friendly, with modes such as sensitivity, image size/quality and white balance - found directly with the mode dial. The image output quality is the middle name of this Nikon digital camera, with great detail rendition, color fidelity and saturation. A rather exceptional feature of the 8800 is the continuous shooting modes, where users can choose 1.2 or 2.3 frames per second. A bit bulky to carry around, the 8800 is perfect for shooting action and sports shots. The 8800 works with a Compact Flash card for storing up your images.

Digital SLR range from Nikon includes Nikon D50. A 6.1 mega pixel Nikon digital camera, this gadget has 7 varied modes to shoot from using its AF-S DX Zoom Nikkor 18-55mm lens. These modes are Auto, Portrait, Landscape, Close Up, Sports, Night Portrait and Child. It has a 2.0 inch LCD screen. How fast can this camera shoot? It has 2.5 frames per second and with uninterrupted shooting of up to 137 frames per second. This Nikon digital camera is not too bad, especially for novice photographers. This package also includes a software for touching up, editing and sharing your pictures. The software even enables you to burn your images to VCD or DVD format.

One of the first point and shoot Nikon digital cameras is the Nikon Coolpix 4800. It is a 4 mega pixel camera with LCD screen. This model has 8.3x zoom level and also a 6-50mm Nikkor Ed lens. Along with that, it comes with a 13.5MB SD card and the Li-ion battery pack. You can shoot, record and playback short movies not to mention exposure and sensitivity settings. A newcomer to digital photography will find that Nikon Coolpix 4800 is quite a handy piece.
